

Förderketten

Conveyor chains

iwis ist ein kompetenter Partner für klassische Förderketten nach DIN 8165 und DIN 8167. Durch Modifizierungen, aufbauend auf ELITE-Förderketten, bieten wir unseren Kunden eine Vielzahl von Einsatzmöglichkeiten, auch abweichend von der Norm.

iwis is your expert partner for classic conveyor chains complying with standards DIN 8165 and DIN 8167. Various modified chain versions, based on standard ELITE conveyor chains, allow us to offer our customers many additional application possibilities, including some which deviate from the standard.

ELITE® Förderketten
Conveyor chains

iwis liefert im ELITE-Programm eine Vielzahl an Förderketten nach DIN 8165 und DIN 8167 sowie nach British Standard in Zollabmessungen und in verschiedensten Sonderausführungen. **Buchsenförderketten** werden oft für Förderaufgaben mit langen Förderstrecken und relativ langsamen Geschwindigkeiten eingesetzt. Für „schwere“ Einsätze empfehlen wir **Rotary-Ketten**. Rotary-Ketten werden mit gekröpften Gliedern montiert, die zu einer erhöhten Elastizität führen, wodurch Belastungsstöße gut aufgefangen werden können.

Da in der Industrie die wenigsten Ketten als reine Normketten verbaut werden, werden **ELITE-Förderketten auftragsbezogen nach Kundenwunsch** geliefert, um eine **Vielzahl an Sonderwünschen** zu realisieren.

ELITE-Highlights:

- Bolzen ① in der Regel aus legiertem Vergütungsstahl, induktiv gehärtet
- Buchse ② aus nahtlosem Präzisionsstahlrohr, einsatzgehärtet
- Laschen ③ aus Vergütungsstahl oder aus legiertem Einsatzstahl, einsatzgehärtet
- Rolle ④ (falls vorhanden) aus Einsatzstahl, einsatzgehärtet

Anwendungsbranchen:

- Holzindustrie
- Stahlindustrie
- Automobilindustrie
- Schüttgutindustrie
- Recyclingindustrie
- ... und viele mehr

Produktprogramm:

- Buchsenförderketten nach DIN 8167 – M Serie
- Rollentragketten nach DIN 8167 – MT Serie
- Hohlbolzenketten nach DIN 8168 – MC Serie
- Hohlbolzenketten nach DIN 8165 – FVC Serie
- Kratzerketten nach DIN 8165/DIN 8167
- Förderketten für die Papierindustrie
- Rotary-Ketten

In the context of the ELITE conveyor chain range, iwis supplies a wide variety of chains according to standards DIN 8165 and DIN 8167, as well as models manufactured according to British Standard with dimensions in inches, and highly diverse special versions. **Bush conveyor chains** are often used for conveying tasks involving long transport distances at relatively low speeds. We recommend iwis **Rotary Chains** for “heavy-duty” applications. Rotary chains are fitted with cranked links, which gives them greater elasticity and the ability to withstand shock loads.

Since only a small minority of chains used in the industry are totally compliant with one specific standard, **ELITE conveyor chains are custom-made to a specific customer order** and consequently **fulfil a large number of special requirements**.

ELITE highlights:

- Pins ① usually made of heat-treated alloy steel, induction-hardened
- Bushes ② made from seamless precision steel tube, case-hardened
- Link plates ③ made of high-strength tempered steel or case-hardened steel alloy
- Rollers ④ (where present) made of case-hardened steel, case-hardened

Industries and applications:

- Wood processing
- Steelmaking industry
- Automotive industry
- Bulk goods transport
- Recycling industry
- ... and much more besides

Product range:

- Bush conveyor chains according to DIN 8167 – M Series
- Carrier chains with rollers according to DIN 8167 – MT Series
- Hollow pin chains according to DIN 8168 – MC Series
- Hollow pin chains according to DIN 8165 – FVC Series
- Scraper chains according to DIN 8165/DIN 8167
- Conveyor chains for the paper industry
- Rotary chains

Rotary-Ketten

Heavy-duty cranked-link transmission chains

Rotary-Ketten wurden vor allem für den Einsatz in besonders hoch beanspruchten Kettentrieben und für sehr ungünstige Betriebsbedingungen entwickelt. Diese Kettenart hat sich in den letzten Jahren auf Grund besonderer Widerstandsfähigkeit gegen sehr starke Stöße, großen Verschleiß und raueste Betriebsbedingungen ein weites Anwendungsgebiet erobert. Rotary Ketten sind weitestgehend maßlich nach ISO 3512, ANSI B 29.10 und DIN 8182 genormt.

Ein bedeutender Vorteil der Rotary-Ketten ist, dass sie aus gleichartigen Gliedern bestehen und sich somit leicht verlängern oder verkürzen lassen. Zusätzlich haben Rotary-Ketten den Vorteil gegenüber Standardrollenketten, dass alle Glieder gleichmäßig dem Verschleiß unterliegen.

ELITE-Rotary-Ketten mit gekröpften Gliedern werden in versplinteter Ausführung **1** hergestellt. Je nach Beanspruchung werden die Laschen **2** aus naturhartem oder vergütetem Spezialstahl hergestellt. Für besonders hochbeanspruchte Ketten verwenden wir induktiv gehärtete Bolzen **3**, um höchste Zähigkeit bei größtmöglicher Oberflächenhärte zu erreichen.

Anwendungsbranchen:

- Erdmaschinen
- Raupenfahrzeuge
- Bohranlagen
- ... und viele mehr

Rotary chains were developed primarily for chain drive applications involving extremely heavy loads or particularly adverse operating conditions. Chains of this type are particularly resistant to violent shocks, wear and extreme operating conditions, and have consequently enjoyed increasing success in a wide range of applications in recent years. For the most part, rotary chain dimensions are standardized under ISO 3512, ANSI B 29.10 and DIN 8182.

One significant advantage of rotary chains is that their links are all constructed to the same pattern, making it easier to lengthen or shorten the chains when required. They have another advantage over standard roller chains – all links are subject to the same level of wear.

ELITE rotary chains with cranked links **1** are fitted with cotter pins. The chain plates **2** are available in naturally hardened steel or special tempered steel, according to the expected mechanical load. Chains subjected to extremely high loads are fitted with induction-hardened pins **3**, making them not only extremely tough, but also giving them the highest possible level of surface hardness.

Industries and applications:

- Excavators
- Caterpillar track vehicles
- Drilling rigs
- ... and much more besides
